

## **RELN MEDIA RELEASE – 2008 WSBA**

### **PRAISES RAIN DOWN ON RELN'S SLIMLINE 2100 WATER TANK AT THE PRESTIGIOUS 2008 WESTERN SYDNEY BUSINESS AWARDS.**

Multi-award winning Australian company, Reln Pty Ltd has once again enjoyed great success at the Western Sydney Business Awards recently winning two major categories and the coveted "Judges Choice Award".

This year's wins included the Global Excellence Award for Most Outstanding Large Business, the Excellence in Innovation Award for Innovative Process or Technology and winner of the overall Judges Choice Award.

These highly regarded Awards recognise Western Sydney businesses and their achievements, including commitments to innovation, proven product value and contribution to NSW and Australian Industry. Reln received high accolades for their innovative Slimline 2100 Water Tank.

However, the greatest praise was that voiced by Reln Managing Director, Nigel Natrass when it came to talking about the Reln team.

"While I am immensely proud of our wins at the 2008 Awards, what I am most proud of is the people at Reln who have made it possible. Each and every member of the company contributes to our success through their commitment to excellence and their dedication to producing the best products on the market. Without their talents, experience and consistent great work, our company wouldn't achieve accolades such as these."

Reln is a home-grown Australian business that design, manufacture, market and distribute water management and environmental products to the plumbing, garden and hardware industries. Their product range is distributed throughout Australia, South Africa, Europe, the UK, USA and South East Asia where they are renowned for their excellence and innovation in plastic design.

Having designed and manufactured an injection moulding machine with the capacity to produce up to 120kg of product, Reln went on to spend 4 years designing and developing the fully injection moulded Slimline 2100 Water Tank.

A worldwide production first, this innovative technology enables Reln to mass produce high quality water tanks for the Australian marketplace at a rate of 1 tank every 5 minutes.

**MORE**

While quick to produce, thank's to Reln's creative production solution, The Slimline 2100 Water Tank is built to last and thoughtfully designed with an appealing sleek form and low profile, compact dimensions for ease of installation and versatility of placement, unique lockdown feet and rigid internal frames which ensure a stable and structurally sound tank.

Naturally, water quality was also a key factor in the design. The Slimline 2100 is a sealed unit with a snap-lock cover which eliminates entry of dust and light which could cause algal growth and also incorporates a fine stainless steel mesh in the leaf strainer and overflow to add a final barrier to contamination, insects and vermin.

Reln now has one of the most modern injection moulding plants in Australia, with a wide variety of machine sizes ranging from 150 to over 4,000 tonne. This attracts customers seeking reliability of product manufacturing, excellent service, timely delivery and improved manufacturing costs.

Reln has previously won Manufacturer of the Year in the NSW Small Business Awards and has also won the Australian Government / CRS Australia Award for NSW/ACT Employer Award.

Reln is a proudly Australian company committed to remaining at the forefront of plastics technology and meeting any challenge to continue manufacturing in Australia.
